

PharmXhealthOne COVID-19 Prevention Policy

As the situation with COVID-19 evolves day-to-day, our top priority during these challenging times continues to be the health and safety of our clients, our great community, and our employees.

Here at PharmXhealthOne, taking care of both our clients, community and our employees is immensely important to us.

Upon arrival at our clinic, our employees are required to be wearing a face mask and must go straight to wash their hands thoroughly. Then, our employees are immediately checked for their temperature and checked for any visible symptom relating to Coronavirus by our healthcare provider. Our employees have been trained on proper hand washing protocol, conduct daily health checks, work areas and devices/computers being used are cleaned and sanitized prior to opening the clinic and every hour throughout the day, until we close.

To keep everyone safe, the following will be required of our clients:

- All clients must be wearing a face mask the entire time they are in our clinic
- Upon entering our clinic, clients are required to sanitize their hands with a hand sanitizer and their temperature checked. If temperature is normal, they will be asked to wash their hands properly, then escorted back to the waiting room or exam room.
- Adhere to social distancing practices

PharmXhealthOne employees are taking the extra steps to keeping our clinic clean and sanitized, and our clients safe and comfortable. Ask our healthcare providers, how we can help you and your family boost your immune system to prevent being infected by the Coronavirus.
